

LoanLite

1. What we are building

LoanLite is a website for a small loan company in India.

The company gives one kind of loan: a **personal loan**. A person borrows money and pays it back in equal monthly amounts. There is no gold, house, or car kept as security.

The loan

Item	Detail
Money	Indian Rupees
Loan amount	₹50,000 to ₹25,00,000
How long to repay	12, 24, 36, 48, or 60 months
Repayment	Equal amount every month (called EMI)
Interest rate	Fixed. Decided by the system

What LoanLite must do

LoanLite will move this work online. A customer applies on the website. Staff review the application. The system checks some rules. A staff member gives the final Yes or No. Everything that happens is recorded.

How an application moves

An application goes through these stages:

1. **Draft** — the customer has started filling the form but not sent it yet
2. **Submitted** — the customer has sent it
3. **In Review** — a staff member is working on it
4. **Waiting for Documents** — some papers are missing
5. **Referred** — the system is not sure, a senior person must look
6. **Decided** — final answer given (Approved or Rejected)
7. **Withdrawn** — the customer cancelled it

2. Who uses the system

There are four types of users. No others.

Applicant

A normal person who wants a loan.

They want to:

- Fill the loan form online
- Save the form and finish it later
- Upload documents like PAN card and salary slips
- See what is happening with their application

Processor

A staff member who prepares the file.

They want to:

- See a list of applications waiting for them
- Pick one and work on it
- Check that all documents are uploaded and correct
- Ask the customer for missing documents

Underwriter

A senior staff member who takes the final decision.

They want to:

- See a list of applications ready for decision
- See the full file with all checks done
- See what the system suggests
- Approve or Reject the loan
- Send the file back to the Processor if something is wrong

Admin

The person who manages the system.

They want to:

- Create and remove staff users
- Give users their role
- See a record of everything that happened
- See simple numbers, like how many loans were approved this month

3. What is in scope

These are the things you must build.

#	Feature	Short description
1	Login and roles	Users sign up or are created, log in, and see only what their role allows
2	Loan application form	A form with several steps. Can be saved and finished later
3	Document upload	Upload files. Show which documents are still missing
4	Outside checks	Call two test services we give you: one for credit score, one to check income

#	Feature	Short description
5	Rule check	The system reads the data and suggests Approve, Reject, or Refer
6	Final decision	The Underwriter gives the real answer. They can disagree with the system
7	Work lists	Each staff role sees a list of applications they need to handle
8	History record	Every change is saved. Who did it, what changed, and when
9	Admin screen	Simple counts and charts for the Admin
10	Status page	The Applicant can see their own application status

Things you must not forget

Teams often skip these. They are part of the work.

- **Error messages** — all errors should look the same and be easy to understand
- **Long lists** — lists must show a few rows at a time, with sorting and filters
- **Field checks** — decide the rules for each field before you code them
- **Who can do what** — write down which role can open which screen and call which API
- **Empty and loading screens** — what does the user see when a list is empty, or still loading, or when something failed?

4. Technology you will use

Part	Technology
Backend	Java, Spring Boot, Spring Data JPA, Spring Security
Database	PostgreSQL
Frontend	Angular or React — pick one, not both
API	REST APIs with JSON
Login	JWT token
Testing	JUnit and Mockito
Code	One shared Git repository
AI help	GitHub Copilot

5. Words we use

Use these exact words. Do not use other words for the same thing. For example, always say "Applicant", never "customer" or "borrower" in your documents.

Word	Meaning
Applicant	The person applying for a loan
Application	One loan request from one Applicant
Processor	Staff member who prepares the file
Underwriter	Staff member who takes the final decision
Declared Income	The income the Applicant types in the form
Verified Income	The income the check service says is correct
EMI	The fixed amount paid every month
Recommendation	What the system suggests: Approve, Reject, or Refer
Decision	The final answer from the Underwriter
Referred	The system could not decide. A person must look at it
Work List	The list of applications waiting for a staff member
